PROFESSIONAL SUMMARY

Full-stack AI engineer who builds and ships not just prototypes, but production systems with real users. I've deployed multi-agent diagnostic pipelines with Lang Graph, production RAG systems handling live document Q&A, and enterprise platforms serving 10,000+ users across 9 departments. On the freelance side, I've delivered paid client projects end-to-end in under 4 weeks. My focus sits at the intersection of LLM orchestration, agentic workflows and full-stack engineering, because intelligent systems that don't ship don't matter.

EDUCATION

Bachelor of Technology (Hons.): Artificial Intelligence and Data Science: 2022-2026

Panimalar Engineering College, Chennai, Tamil Nadu, India

Higher Secondary (Class XII), Tamil Nadu State Board – Islamia Higher Secondary School, 2022

SKILLS

Programming Languages: Java, Python, JavaScript, PHP

Backend & APIs: Spring Boot, Node, Express REST APIs

AI & LLM: LangGraph, LangChain, RAG, Prompt Engineering, Multi-Agent Orchestration, FAISS, NLI-based Fact-Checking

Databases: MongoDB, PostgreSQL, MySQL

Web Development: HTML5, CSS3, Tailwind, Bootstrap, React, Next.js

Mobile App Development: React Native, Expo

Tools & Platforms: Git, GitHub, Jenkins, Maven, Claude, Cursor, Kiro, Github copilot, Antigravity

Cloud, DevOps & Methodologies: Azure, GCP, Oracle Cloud, Docker, Kubernetes, CI/CD, Agile Scrum

EXPERIENCE

Full-Stack Developer & Production Engineer - Panimalar Engineering College

Oct 2024 – Mar 2026 (PHP, MySQL, HTML, CSS, JS) - [Website](#)

- Spearheaded end-to-end development and deployment of the Unified Students Insight Platform an automated feedback insights and real-time attendance monitoring serving 10,000+ students and 450+ faculty across 9 departments
- Reduced query latency by 40% through enhanced MySQL schema design handling large-scale concurrent reads across multi-department reporting workflows
- Sustained 4 production web applications simultaneously owning uptime, bug resolution, and release cycles for both self-built and inherited systems.

Full-Stack Developer – Triblet

Nov 2024 – May 2025 (React Native, TypeScript, Firebase)

- Orchestrated the architecture of a flexible pricing engine, increasing average booking value by 15% through demand-based adjustments for venues as part of an early-stage startup build.
- Engineered a tournament bracket engine (Knockout & League) with real-time Firebase Firestore writes and a 3-tier RBAC admin dashboard across administrators, venue managers and end users.

Freelance Full-Stack Developer

NS Giftings: Nov 2025 – Dec 2025 - [Website](#)

- Built and deployed SEO-optimized B2B platform supporting bulk corporate orders. Achieved #1 ranking for branded Google search within launch phase. Engineered SSR-based architecture improving crawlability and search visibility.

E-Commerce Platform (Client-Approved Pitch): Dec 2025 - [Website](#)

- Built full-stack e-commerce system with auth, cart, checkout, and Google Pay integration. Developed mobile-first responsive UI and dynamic product catalog. Delivered production-ready architecture approved by client for future deployment.

PROJECTS

MEDAGENT(Python, LangGraph, Pydantic) [Live Webpage](#) | [GitHub](#)

- Orchestrated a 5-agent diagnostic pipeline using LangGraph and IBIS-structured argumentation with weighted consensus voting and inconsistency penalties
- Introduced a novel Patient Interaction Agent for dynamic follow-up querying.
- Architected a modular LLM factory supporting 5 providers enabling runtime cost-accuracy trade-off selection

PAPERBRAIN(LangChain, FAISS, Sentence Transformers): [Live Webpage](#) | [GitHub](#)

- Developed and deployed a RAG pipeline: multi-format ingestion → semantic chunking → FAISS vector retrieval → Gemini 3.1 generation with source attribution
- Integrated conversation memory for context-aware multi-turn Q&A across PDF, TXT, and DOCX documents
- Improved retrieval latency using sentence transformer embeddings with local FAISS indexing for sub-second similarity search

AGENT STERLING(AsyncIO, FastApi): [Live Webpage](#) | [GitHub](#)

- Built a scalable async backend to process 1,000+ social media events/day across Mastodon and Twitter with **95% uptime**.
- Implemented intelligent API **rate limiting**, robust error recovery and modular architecture, ensuring resilience under platform constraints.

ACHIEVEMENTS & EXTRA CURRICULAR ACTIVITIES

- 1st Place, Bit-N-Build Hackathon 2024 (Tamil Nadu Region); finalist in Mumbai finale.
- Top 25/1000+ teams, 100x Engineers AI Agent Hackathon.
- Presented research paper on *AI Healthcare with Federated Learning* at IEEE IConIC 2025.

CERTIFICATIONS

- Software Engineering Virtual Experience – JPMorgan Chase via Forage (Sept 2025)**
Completed practical tasks including project setup, Kafka integration, H2 database integration, and REST API development.
- Agile Scrum in Practice, AI Primer Certification, Principle of GenAI certification – **Infosys Springboard**
- OCI 2025 Foundations Associate – **Oracle**, Cybersecurity Fundamentals – **NASSCOM**
